

## ***Downloading and installing the Release 2007 Via client for Macintosh***

**It is essential that the Innovative Millennium client be REMOVED before downloading the new Via client.**

1. In the address box of a web browser window, enter the following address and press enter: <http://via.besc.ppsnet/viaup141.zip> The file should unzip automatically, creating an **Install** file.
2. Double-click on the **Install** file.
3. Choose **Next** when prompted by the setup wizard.
4. At the **Where would you like to create the Via alias?** prompt, choose a location, then choose **Next**.
5. At the prompt, enter **lxlibprod.pps.k12.or.us** as the server address, then press **Next**.
6. The wizard displays a status screen with details on the Product Name, Install Folder, Alias Folder, Millennium Server, and Disk Space Information. Choose **Install** to continue.
7. You will see a progress dialog, then the wizard will announce when the installation is complete.
8. The Via installation is complete and a Via icon will appear. Click twice on it to launch.

### **If you are having problems...**

To run these installers, the Macintosh workstation is required to have:

- Mac OS X 10.2.3 or later (in order to run JRE 1.4.1 or JRE 1.5.0\_06)
- JRE 1.4.1 or JRE 1.5.0\_06 (not part of this installer; you can upgrade the JRE through the Mac's Software Update utility or by going to <http://developer.apple.com/java/download/> and searching for the correct JRE)

If the workstation does not have the correct JRE when you run this installer, the system displays an error message with the correct required JRE. You must upgrade the JRE before running the installer again.
